

Customer churn is a retention problem hiding in plain sight

Use the analysis to show where the risk concentrates and what a retention team should do next.

THE DATASET

The dataset is broad enough to separate signal from noise

7,043 unique telecom customers

Across 21 features spanning demographics, services, contracts, and billing.

Core fields cover the churn journey

Tenure, monthly charges, total charges, contract, payment method, and churn.

Source: supplied customer churn analysis.

Clean inputs make the churn readout trustworthy

The workflow is simple: repair the field, set its type, then verify the table.

01

Replace anomalies

Replace whitespace anomalies in
TotalCharges with zero.

02

Cast to numeric

Cast TotalCharges to numeric.

03

Verify integrity

Verify zero nulls, zero duplicate
rows, and unique customer IDs.

A simple data-quality pipeline, not code.

BASELINE

One in four customers has churned

26.54
%

of the customer base has churned

Retained: 5,174 customers, 73.46%

Churned: 1,869 customers, 26.54%

That is the baseline every segment should be compared against.

Gender is not the lever to pull first

Nearly equal distributions

The source analysis shows nearly equal female and male customer distributions, with no meaningful separation in churn counts.

Keep the lens elsewhere

Gender is not a primary differentiator here. Keep the lens on behaviors, services, contract terms, and experience instead.

Senior customers churn at nearly twice the rate

■ Retained % ■ Churned %

Non-senior

Senior

Customer segment

41.7%

Senior customers

476 of 1,142

23.6%

Non-senior customers

1,393 of 5,901

Gap: 18.1 percentage points.

The risk is concentrated, not evenly distributed

Share of customer base

16.2%

Seniors are 16.2% of the customer base.

Senior churn rate

41.7%

Seniors churn at 41.7%.

Retention focus

Monitor the segment

Use segment-level monitoring rather than relying on the portfolio average.

That makes senior-customer experience a high-priority retention focus.

Turn the finding into a retention test plan

01

Audit the journey

Audit senior-customer journeys across onboarding, support, billing, and service setup.

02

Test targeted interventions

Design targeted interventions and compare churn against the 41.7% segment baseline.

03

Expand the analysis

Expand the analysis to contract, tenure, internet service, support, and payment method.

Next step: move from descriptive analysis to cohort-level retention experiments.
